

Notes on results & parameters

- Speed data and Animal position data (detection angle and radius) have been pooled from 2021 and 2024, to increase sample sizes.
- Sambar & Hog deer activity rates have been calculated by a combination of the 2021 and 2024 data, again to increase sample sizes and integrity of the final activity rate. The activity rates for the other species - Indian hare & Indian Jackal - have not been pooled across seasons, however.
